                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-08-200-011-1/c
| Sequence 1, Application US/08200011
| Patent No. 5614396
| GENERAL INFORMATION:
| APPLICANT: BRADIESY, ALLAN
| APPLICANT: DAVIS, ANN
| APPLICANT: HASTY, BAUL
| TITLE OF INVENTION: METHODS FOR THE GENETIC MODIFICATION OF
| TITLE OF INVENTION: METHODS FOR THE GENETIC MODIFICATION OF
| TITLE OF INVENTION: METHODS FOR THE GENETIC MODIFICATION OF
| TITLE OF INVENTION: METHODS FOR THE GENETIC MODIFICATION OF
| TITLE OF INVENTION: METHODS FOR THE GENETIC MODIFICATION OF
| TITLE OF INVENTION: METHODS AND ANIMALS
| NUMBER OF SEQUENCES: 7
| CORRESPONDENCE ADDRESS: 1299 PERNSYLVANIA AVENUE, N.W.
| STREET: L299 PERNSYLVANIA AVENUE, N.W.
APPLICANT: Diamandis, Eleftherios
APPLICANT: Dunn, James M.
APPLICANT: Stevens John K.
TITLE OF INVENTION: Method, Reagents and Kit for Diagnosis
TITLE OF INVENTION: and Targeted Screening for p53 Mutations
NUMBER OF SEQUENCES:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 10, Application US/08459383

Patent No. 5741690

GENERAL INFORMATION:
APPLICANT: Gelfand, David H.
APPLICANT: Stoffel, Susanne
TITLE OF INVENTION: Recombinant Expression Vectors and
TITLE OF INVENTION: Purification Methods for Thermus Thermophilus DNA
TITLE OF INVENTION: Polymerase
NUMBER OF SEQUENCES:
ADDRESSEE: Hoffmann-La Roche Inc.
STREES Hoffmann-La Roche Inc.
GTREY: Nature of Mingsland Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 0.7%; Score 12.2; DB 1; Length 18; Best Local Similarity 82.4%; Pred. No. 7.1e+02; Matches 14; Conservative 0; Mismatches 3; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STREET: 34 KINGSIAND SIZECT

GENERAL INFORMATION:
APPLICANT: Prockop, Darwin J.
APPLICANT: Rock, Matthew J.
TITLE OF INVENTION: DETECTION OF SINGLE BASE MUTATIONS AND TITLE OF INVENTION: OFFER VARIATIONS IN DOUBLE STRANDED DNA BY TITLE OF INVENTION: CONFORMATION-SENSITIVE CELL ELECTROPHORESIS NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSEE: PANITCH SCHWARZE JACOBS & NADEL, P.C.
STREET: FLOOR
STREET: PLOOR
CITY: PHILADBLPHIA
STATE: PENNSYLVANIA
                    WESOUR 1317

US-06-468-551-5/c

Sequence 5, Application US/08468551

Patent No. 5874212

GENERAL INPORMATION:

APPLICANT: Prockop, Darwin J.

APPLICANT: Ganguly, Arupa

APPLICANT: Ganguly, Arupa

TILLE OF INVENTION: DETECTION OF SINGLE BASE MUTATIONS AND

TILLE OF INVENTION: CONFORMATION-SENSITIVE CELL ELECTROPHORESIS

NUMBER OF SEQUENCES:

ADDRESSEE: PANTICH SCHWARZE JACOBS & NADEL, P.C.

STREET: ONE COMMERCE SQUARE, 2005 MARKET STREET, 22ND

Sequence 47, Application US/09255893A

GENERAL INFORMATION:
APPLICANT: Lex M. Cowsert
TITLE OF INVENTION: ANTISENSE MODULATION OF PHOSPHOLIPASE A2 GROUP IV EXPRESSION
TILE REFERENCE: RTS-0055
CURRENT APPLICATION NUMBER: US/09/255,893A
CURRENT FILING DATE: 1999-02-23
SEQ ID NO 47
LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

j Sequence 13, Application US/09050559C

j Patent No. 6096502

general information:
   APPLICANT: Sam S-K Lee
   TITLE OF INVENTION: NOVEL SUBSTRATE FOR DETECTING UL9
   TITLE OF INVENTION: HELICASE ACTIVITY
   NUMBER OF SEQUENCES: 37
   CORRESPONDENCE ADDRESS:
   ADDRESSEE: David J. Weitz, Wilson Sonsini Goodrich
   ADDRESSEE: & Rosati
   STREET: 650 Page Mill Road
                                                                                                                                                                                                      3; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 4, Application US/09209525
Patent No. 6303770
GENERAL INFORMATION:
APPLICANT: Lock, Si
APPLICANT: Conklin, Darrell C.
APPLICANT: Conklin, Darrell C.
TITLE OF INVENTION: Mammalian Alpha Helical Protein-1
FILE REFERENCE: 97-71
CURRENT APPLICANTON INMBER: US/09/209,525
CURRENT FILING DATE: 1998-12-10
NUMBER OF SEQ ID NOS: 56
SOFTWARE: FRAESEQ for Windows Version 3.0
SEQ ID NO 4
LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 0.7%; Score 12.2; DB 1; Best Local Similarity 82.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 1431
US-09-496-694B-93/C
Sequence 93, Application US/09496694B
Patent NO. 6335194
GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
APPLICANT: Exic E. Swayze
APPLICANT: Lex M. COWNERT
TITLE OF INVENTION: ANTIENSE MODULATION OF SURVIVIN EXPRESSION
FILE REFERENCE: ISPH-0439
CURRENT FILING DATE: 1999-04-05
FRICK PAPLICATION NUMBER: 09/286,407
PRIOR FILING DATE: 1999-04-05
FRICK PRIING DATE: 1999-04-05
FRICK PRIING DATE: 1999-04-05
FRICK PRIING DATE: 1998-09-29
NUMBER OF SEQ ID NOS: 249
SEQ ID NO 93
LENGTH: 18

j Sequence 22, Application US/09303069A

patent No. 6350592

GENERAL INFORMATION:

APPLICANT: Lee, Mu-En

TITLE OF INVENTION: SINGLE GENE ENCODING AORTIC-SPECIFIC AND STRIATED-SPECIFIC

TITLE OF INVENTION: NUSCLE CELL ISOFORMS AND USES THEREOF

TITLE OF INVENTION: NUMBER: US/09/303,069A

CURRENT APPLICATION NUMBER: US/09/303,069A

CURRENT TILING DATE: 1999-04-30

EARLIER APPLICATION NUMBER: US 09/134,250

BARLIER FILING DATE: 1998-08-14

NUMBER OF SEQ ID NOS: 24

SOFTWARE: PASESEQ for Windows Version 3.0

SEQ ID NO 22

LENGTH: 18

Sequence 2, Application US/08882322

Sequence 2, Application US/08882322

Patent No. 6407056

GENERAL INFORMATION:

APPLICANT: Selberg et al.

TITLE OF INVENTION: METHODS FOR ALTERING HAIR GROWTH AND HAIR PIGMENTATION BY INTERSPONDENCES: 8

CORRESPONDENCES: 8

CORRESPENT One J&J Plaza

STREET: One J&J Plaza

CITY: New Brunswick

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

APPLICATION:

TITLE OF INVERTION:

FILE REPERENCE: RTS-0275

CURRENT APPLICATION NUMBER: US/09/920,760

CURRENT PILING DATE: 2001-08-01

NUMBER OF SEQ ID NOS: 89

SEQ ID NO 42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                 Patent No. 6429301

GENERAL INFORMATION:
GENERAL INFORMATION:
FAPPLICANT: Barkerville, Donald Scott
APPLICANT: Barkerville, Donald Scott
APPLICANT: Barkerville, Donald Scott
APPLICANT: Barkerville, Donald Scott
APPLICANT: Barkerville, Dovid P.
TITLE OF INVENTION: Use of a Ribosyme to Join Nucleic Acids
TITLE OF INVENTION: Use of a Ribosyme to Join Nucleic Acids
TITLE OF INVENTION: Use of a Ribosyme to Join Nucleic Acids
FILER REFERENCE: 0390-1177-007
CURRENT APPLICATION NUMBER: US/09/702,543
CURRENT APPLICATION NUMBER: US 60/082,256
FRIOR FILING DATE: 1998-04-17
FRIOR PRILING DATE: 1998-04-17
NUMBER OF SEQ ID NOS: 9
SOFTWARE: FastSEQ for Windows Version 4.0

Sequence 4024, Application US/09371772B

Patent No. 6566127

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Bavco, Pam, Jam

APPLICANT: Brocken, Jam

APPLICANT: Brocked, Jame

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

CURRENT APPLICATION NUMBER: US 60/005,974

PRIOR APPLICATION NUMBER: US 60/005,974

PCT-USS5-08605-36

Sequence 36, Application PC/TUS9508605

GENERAL INFORMATION:
APPLICANT: Visible Genetics Inc.
APPLICANT: Visible Genetics Inc.
APPLICANT: Dunn, James M.
APPLICANT: Stevens, John K.
TITLE OF INVENTION: Method, Reagents and Kit for Diagnosis
TITLE OF INVENTION: and Targeted Screening for p53 Mutations
NUMBER OF SEQUENCES: 41

CORRESPONDENCE ADDRESS:
ADDRESSEE: Oppedahl & Larson
STREET: 1992 Commerce Street, Suite 309
CITY: Yorkcom Heights
ZIPLE: NY
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .
